#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 16-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what step is performed in "ensuring that the material strength around each of the seats has essentially a same material strength as the support part."

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 11, 12, 14, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams. Adams discloses an elongate support element 9 comprising plural seats (figure 1) penetrating a surface on the element and enabling the element to be applied to the implants, center axes of each of the plural seats aligning with center axes of the implants, the element comprises a homogeneous material, a wall of each seat comprises the material, and the figures show seats prevent communication between the surface on the elongate support element and an opposing surface of the element and the center axes of the seats are non-parallel; however, Adams does not explicitly disclose the material strength of the support element material. It

Application/Control Number: 10/020,401

Art Unit: 3732

would have been obvious to one having ordinary skill in the art at the time the invention was made that the support element material made of homogeneous material would possess the same material strength in the entire material. Each seat wall has a surface in the material. The material at the wall possesses the same material in the element does not have intermediate layers of material compositions and material alterations, and the same chemical composition in that the whole element is made of the same material.

Page 3

5. Claims 16-19 are rejected as understood, under 35 U.S.C. 103(a) as being unpatentable over Willoughby in view of Adams. Willoughby discloses a method for producing and installing a tooth replacement structure comprising forming two recesses directly in a blank material using milling equipment to form a support part from the blank material, the forming recesses avoids forming a through hole in the material, applying the support part to implants using the recesses as seats in the support part, the seat meets set accuracy of fit, and applying tooth replacement material to the support part (column 79 line 25); however, Willoughby does not show center axes of recesses are non-parallel with each other. Adams teaches having support part having recesses wherein the center axes of the recesses are non-parallel with each other. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the recesses non-parallel as in Adams in order to hold the support part on the jaw on the user in view of Adams. As to the step of ensuring material strength around the seats, it is believed that the process of milling a homogeneous blank material would result in the same material strength of the remaining blank material (support part). The seats are in the formed element using milling equipment, which is fed milling coordinates information and integrated milling data. The recess avoids material not integral with the blank material.

## Response to Arguments

6. Applicant's arguments filed August 7,2006 have been fully considered but they are not persuasive. It is believe that the prior art suggests or renders obvious the limitation of a property of the material of the support element in the claims.

#### Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melba Bumgarner whose telephone number is 571-272-4709. The examiner can normally be reached on Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can be reached at 571-272-4720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
